No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq length: 0 seq length: 2000000000

                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein search, using sw model

The present invention describes a vehicle-peptide molecule (I) or its cultimers. (I) can have antiinflammatory, antitumour, immunosuppressive, conviously anorestic, antianthritic, antidiabetic, ophthalmological, contianemic, anorestic, antiinfertility, haemostatic, dermatological and concerning anorestic, antiinfertility, haemostatic, dermatological and concerning the properties of the control of the concerning purposes. (I) is useful for control of interest, for identifying normal or abnormal proteins of interest, as a part of diagnostic kit to detect the presence of their control of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, contentialty, and neurological degenerative diseases, (I), comprising compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful for treating conditions that involve an existing compounds are useful in thrombocytopaenia, systemic lupus erythematosus, and Fanconi's syndrome. ABB72403 to ABB73426 and ABI35695 to ABI35777 conditions that involve and actical actic actical acti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel vehicle-peptide molecule or its multimers useful for tree inflammatory and autoimmune diseases, cancer, rheumatoid arthridiabetic retinopathy, obesity, sleep disorders and infertility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The peptides of the invention are effective pharmaceuticals having anti-microbial, anti-viral and anti-tumour activity. They are also useful for inhibiting, preventing or destroying the motility of sperm and hence have application in a spermicide preparation. They also have anti-parasitic activity and are useful in wound healing, as preservatives and sterilants and to inhibit growth of phytopathogenic microorganisms. AAR20969 and AAR20970 were published in Haighten and Ostresh, Bio Chromatography, Vol 2, issue 2, page 80-83, near

                                                                                                              anti-microbial, anti-viral and anti-tumour activity. They are also useful for inhibiting, preventing or destroying the motility of sperm and hence have application in a spermicide preparation. The also have anti-parasitic activity and are useful in wound healing, as preservatives and sterilants and to inhibit growth of phytopathogenic microorganisms. AAR20969 and AAR20970 were publish that they are also chromatography, vol 2, issue 2, page 80-

The peptide is an analogue of the peptide having SEQ ID NO 3 (AAR22824), with an N-terminal extension of 18 amino acids. Substitution and deletion analogues of this peptide have increased biological activity and are effective as pharmacuticals e.g. antibiotics for bacterial, fungal or viral infections, or in spermicides or antitumour or antiparasitic agents. Additionally the peptides can be used in wound healing compsns. or for treating burns or other skin or eye infections. See also AAR22822-89.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiparasitic;

They are also useful for inhibiting, preventing or destroying the motility of sperm and hence have application in a spermicide preparation. They also have anti-parasitic activity and are useful in wound healing, as preservatives and sterilants and to inhibit growth of phytopathogenic microorganisms. AAR20969 and AAR20970 were publish Haighten and Ostresh, Bio Chromatography, Vol 2, issue 2, page 80-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Method for inhibiting target cell and virus growth - comprises administering amphiphilic peptide compsns, useful for treating viral and phytopathogenic infections, tumours and burns
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Amphiphilic peptide; anti-microbial; anti-viral; anti-tumour; spermicide; wound healing; sterilant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 acetylated N-terminus, may be a C-terminal amide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Haighten

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The amphiphilic peptide (SEQ ID NO 61) was prepd. by standard solid phase methods. The peptide is an analogue of the peptide having SEQ ID NO 3 (AAR22824), with an N-terminal extension of 8 maino acids. Substitution and deletion analogues of this peptide have increased biological activity and are effective as pharmacuticals e.g. antibiotics for bacterial, fungal or viral infections, or in spermicides or antitumour or antiparasitic agents. Additionally the peptides can be used in wound healing compsns. or for treating burns or other skin or eye infections. See also AAR22822-89.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAR56957;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide which neutralises bacterial endotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAR56957 standard;

The present invention describes a method for producing micelles with entrapped therapeutic agents. The method comprises: (1) combining negatively charged agent with a cationic lipid in a ratio where 30-90 % of the negatively charged atoms are neutralised by positive charges on lipid molecules to form an electrostatic micelle complex in 20-80 % ethanol; and (2) combining the micelle complex of (a) with fusogenic-karyophilic peptide conjugates in a 0.0-0.3 ratio, therefore producing micelles with entrapped therapeutic agents. Also described is a method for delivering a therapeutic agent in vivo, comprising the administration of the micelle. ABB74256 to ABB74858 represent specifically claimed nuclear localisation signal (NLS) peptides for use in the method as the fusogenic-karyophilic peptides. The micelles produced can have cytostatic and antitumour activities.
                                                                                                                                                                                                                                                                              Encapsulation of plasmid DNA (Lipogenes) and therapeutic agents with nuclear localization signal/fusogenic peptide conjugates into targeted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Septic shock is often due to the body's reaction to foreign lipopolysaccharide (LPS). The compounds of the invention neutralise bacterial endotoxins without neutralising essential proteins in the plasma of patients, eg.heparins. They also have longer duration of activity than unconjugated peptides. In general peptides such as this are ion-channel forming peptides. The compounds are biologically active peptides linked to a conjugate moiety, eg. carbohydrates, proteins, polyvinylpyrrolidone, polyalkylene glycols and polyvinyl alcohols. The conjugate moiety may be linked at the C- or N-terminal or internally of the peptide. ARR55591-631 and ARR56879-957 are examples

The invention relates to the field of gene therapy and is directed toward methods for producing peptide-lipid-polynucleotide complexes suitable for delivery of polynucleotides. The encapsulated molecules display therapeutic efficacy in eradicating solid tumours including but not limited to breast carcinoma or prostate carcinoma.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TUABLICA
                                                                                                                                        The present peptide is a specific example of a cationic oligopeptide corresp. to the formula (b-1-1-b)n, where b is a hydrophobic amino acid 1 is a hydrophilic amino acid and n is at least 4. In this case, where b is Leu, 1 is Lys and n = 10, the oligopeptide forms an alpha-helix which forms a stable complex with a nucleic acid. The complex is suitable for transferring nucleic acid, esp. in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                  Complex of nucleic acid and oligopeptide with sec. structure transfer vectors contg. them, useful for efficient transfer concleic acid to cells in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-FEB-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      08-FEB-1994;

                                                                                                                           The invention relates to analogues of a magainin I or II, D-form analogues, deletion analogues or related peptides. It also relates to basic polypeptides having at least 16 amino acids, including at 18 hydrophobic amino acids and at least 8 hydrophilic amino acids. The peptides may be used as antimicrobial agents, antiviral agents, antipiotics, antitumour agents, antiparasitic agents, spermicides, preservatives or sterilants, or agents for promoting wound healing. present sequence represents a specific example of a peptide disclose the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW66517;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The peptides of the invention are effective pharmaceuticals having anti-microbial, anti-viral and anti-tumour activity. They are also useful for inhibiting, preventing or destroying the motility of appear and hence have application in a spermicide preparation. They also have anti-parasitic activity and are useful in wound healing, as preservatives and sterilants and to inhibit growth of phytopathogenic microorganisms. AAR20969 and AAR20970 were published haighten and Ostresh, Bio Chromatography, Vol 2, issue 2, page 80-83, nag

The peptide is an analogue of the peptide having SEQ ID NO 3 (AAR22824), with Leu at position 4 deleted. Substitution and deletion analogues of this peptide horeased biological activity and are effective as pharmaceuticals e.g. antibiotics for bacterial, fungal or viral infections, or in the peptides or antitumour or antiparasitic agents. Additionally burns or other skin or eye infections.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
